

THANKSTIVING TURKEY SENSORY BOTTLE

THANKSGIVING TURKEY SENSORY BOTTLE

step by step photo tutorial

Kid Activities With Alexa

SUPPLIES NEEDED

- [Sensory bottle](#)
- Clear Glue
- Brown [food coloring](#)
- Brown Glitter
- Brown/Red confetti
- Medium size googly eyes
- Red construction paper
- Orange Felt
- Hot Glue Gun
- Scissors

Step 1- Add WATER AND glitter

Start with filling up your bottle about 3/4 of the way with like warm [water](#). Then add about 1 Tablespoon of glitter (about half of the small bag) and about ½ Tablespoon of confetti.

STEP 2- Add food coloring

Add a drop of food coloring. Just one. You need to make sure the water stays translucent and you are able to see the glitter through. My food coloring brand is very strong so I actually had to empty out a bit of the water and replace it with fresh water to lighten the color up.

Step 3 – Add Glue

Close the bottle and make sure you like the amount of glitter and confetti you have. If you like it then open back up the bottle and add glue to the remainder of the bottle. Leaving some breathing room over the top so the liquid inside the bottle can move.

Test the speed of glitter falling

Close the bottle and give it a good shake. See how the glitter and confetti slowly falls down. If you want the glitter to fall down slower, add more clear glue.

Step 4- Add eyes and beak

Seal the bottle with super glue if you are afraid your little one will try to open the bottle.

Using the hot glue gun glue the google eyes towards the top of the bottle.

How to create the beak

Cut up a triangle using the orange felt paper. I'm using felt because I want the bottle to have a ton of different textures to provide a full sensory experience. If you don't have felt, you can use craft foam or construction paper.

Using the red construction paper, create an eight (8) shape.

Glue the triangle to the eight shape and then both together to the bottle.

Step 5 – Add feathers

The last step is to add the feathers to the back of the bottle. I used the hot glue gun to attach them and glue them in an arch position. I chose red, orange and yellow to keep the fall colors, but you can use any colors you want.
